

# Parking Lots Change at Hospital

## Twenty more parking spaces created

Crews have been working very hard this month on parking lot improvements at Monadnock Community Hospital to ensure that they are ready for the winter. The crews will continue to work in other areas throughout the winter.

### One Lot Opens, Another Closes

Within two weeks, a new parking lot (see #1 on map) will open for patients, visitors and staff. At the same time, another parking lot will close (see #2 on map).

For the remainder of the winter, the majority of patient parking spaces will be located in the parking lots in front of the Bond Wellness Center.

We are happy to report that this change will increase the total number of parking spaces on the hospital campus by more than 20.

Patients will notice that the new parking lot is slightly lower than

the adjacent lot. This difference guides water run-off from the new lot into the new detention pond (see #3).

### Lighting in New Lot

The lights from the closed parking lot will be temporarily placed in the new parking lot for the winter. In the spring, the new lot will be finalized with islands, plantings and permanent lights.

### Other Updates

- The main entrance to the hospital will remain the same throughout the winter. Roundabout construction will

resume in the spring.

- Perimeter road construction (see #4 & 5 on map) will continue throughout the winter. The road will remain closed.
- The foundation for the generator building (see #6 on map) is in progress.
